

Nkom invites you to

A JAMMERTEST ON ANDØYA!

Save the dates: 19th September – 23rd September 2022

Get unique opportunities to test your equipment and expose it to GNSS jamming in controlled conditions. We invite authorities, industry and experts to test GNSS jamming and spoofing of equipment.

Andøya in Vesterålen lies between high mountains, with very favourable test conditions to limit the transmission of jamming signals.

The Jammertest is a follow-up to the Testfest held in Skibotn in September 2021, under the auspices of the Norwegian Public Roads Administration.

YOU CAN REGISTER YOUR INTEREST IN TESTING NOW

We would like to hear from actors wishing to test their products/equipment, or to have the opportunity to get experience from the tests in other ways.

To optimise the programme, it is important that as many test actors as possible register their interest in participating, preferably **before the end of April.**

CONTACT

Contact for registration and practical information:

Heidi Andreassen
email: heidi@testnor.com
mobile: (+47) 41 65 03 58

Contact senior engineer Nicolai Gerrard at Nkom, email: nge@nkom.no, or mobile: (+47) 90 70 87 72

This information will be followed up with an invitation, programme and registration before the summer.
